

Construction in 2025

Students of today are the professionals of tomorrow.

With Tekla Campus you get...

Country specific BIM software.

Interactive, industry related lessons.

Industry case studies to extend the learning

Careers!

BIM is impacting the way the built environment designs, models, and constructs and as BIM becomes integrated and woven into our Design Build Operate processes it is a necessity that the students of today graduate with the knowledge and skills required to continue this evolution.

A report highlighted the need for employers to invest in the skills of its workforce. Collaboration between academia and industry is needed to successfully prepare the future construction professionals with BIM ready skills.

At Trimble, we have recognized this skill shortage and are committed to helping the industry with this skills gap. To avoid any barriers we have created an online platform giving students access to Tekla Structures, a state of the art BIM software, as well as industry specific tutorials. By preparing students with industry knowledge related to construction management, structural engineering, cost estimating, and detailing, and giving students access to the software used in the industry for free, Tekla Campus creates a platform where students can jumpstart their their career. This platform also gives students a community where they can promote their skills, share knowledge with their peers, and gain valuable insight from industry experts.

How to improve your skills and career chances in a competitive job market in **THREE STEPS**
